ABSTRACT

The balance of power drastically changed in the South Caucasus after the Second Karabakh War in 2020 and the Russian hegemony declined to an important degree. In particular, the deal of "Trump-Zangezur Corridor" was made between Armenia, Azerbaijan and the United States on August 2025 and it was met with great astonishment by international public. Due to the topicality, the topic of the "Trump-Zangezur Corridor" has not been sufficiently researched yet in the academic world and this work was prepared in order to fill the blank. The work will discuss the questions of why the deal of "Trump-Zangezur Corridor" was made in the year and how it can affect the international system in the region in the context of neo-classic realism. It will argue that the deal related to the corridor was made because of Armenia's and Azerbaijan's political situation and the United States' strategy against Russia and Iran related to the Russo-Ukrainian War and that the deal will bring only temporary tranquilty and can cause the rise of tension between actors in a long term. As for methodology and research methods, the work will be based on neo-classic realist theory of International relations. Thus, interpretvist methodology is applied. While the work will generally benefit from secondary resources, it will use also internet news agencies both as empirical resources and for content analysis. In terms of the structure, chapter one will determine the theoretical structure and the reasons of the deal about the corridor will be discussed in the next chapter. After that, the possible results of the deal will be discussed based on neo-classic realism and the part of conclusion will emphasize the verification of the hypothesis.
